

A facilitator for the library community

SWIB - Semantic Web in Libraries, 27th November 2020

A network of interconnected libraries

Share-VDE in 5 steps

Share-VDE is an initiative lead by the community of participating libraries, with the aim of setting up linked data based workflows.

Share-VDE makes available

- 1. conversion of library catalogues from MARC to linked data;
- 2. enrichment of original MARC data and of the records converted in linked data with identifiers from external sources (e.g. ISNI, VIAF) and with original Share-VDE identifiers;
- 3. reconciliation and clusterization of entities created through library data conversion;
- 4. delivery of converted and enriched data to libraries for reuse in their systems;
- 5. publication of library records converted in linked on the discovery platform www.share-vde.org.

Share-VDE pillars

Integration

Autonomy

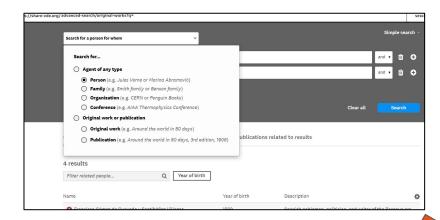

Community engagement

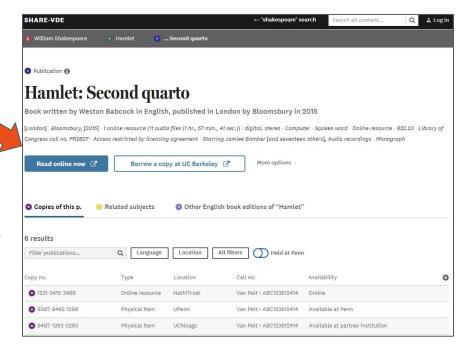

Shared vision

Integration

Integration is the core of the SVDE platform that aggregates data from multiple libraries to form clusters of entities.

Autonomy

SVDF localisation for the

University of Pennsylvania

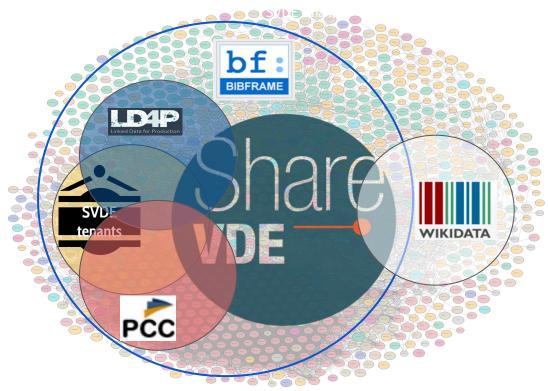

Kubikat-LOD parallel project platform

Kubikat-Lop

Community engagement

Communication and events:

wiki platform https://wiki.share-vde.org/

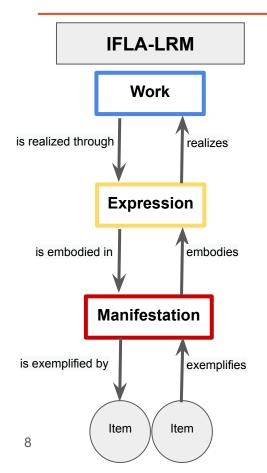

that will serve both as a showcase as well as a collaborative platform among SVDE members

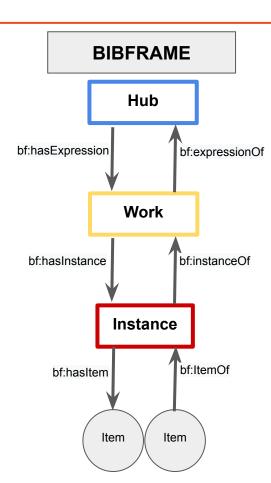

events: ALA MW, LIBER conference, LD4 conference, European BIBFRAME Workshop

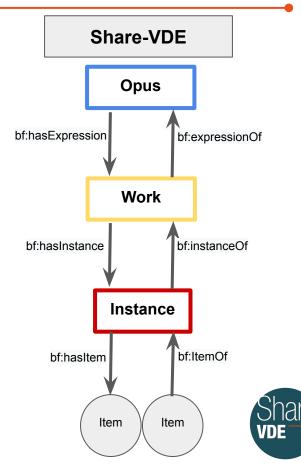

articles and resources

https://wiki.share-vde.org/wiki/ShareVDE:R esources#Bibliographic_references

Shared vision

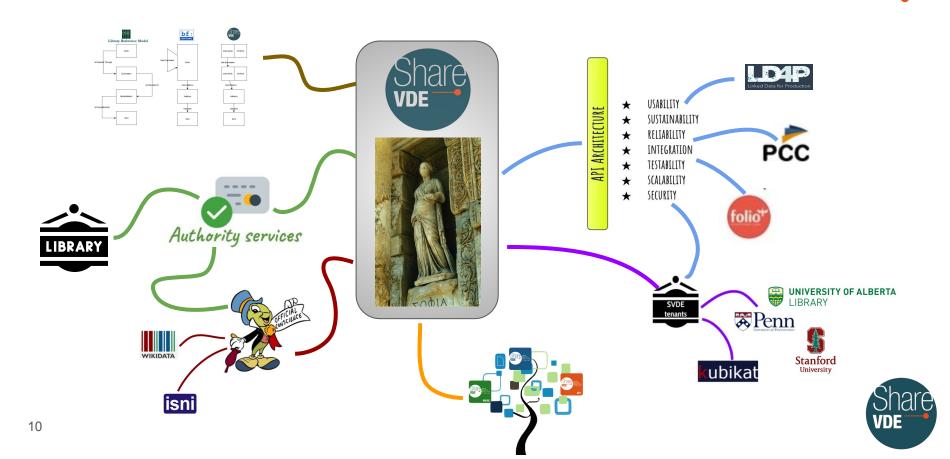

(Some of) Share-VDE interconnections

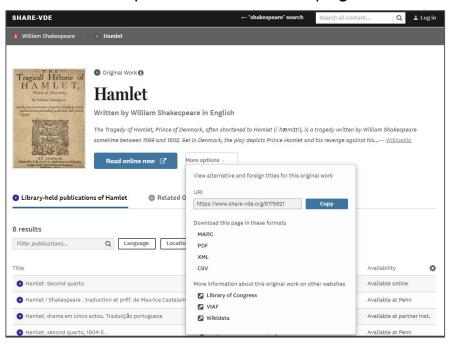

Sapientia ecosystem

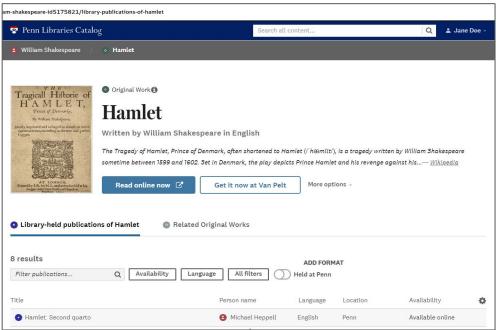

Facilitate integration with local library services

Main Share-VDE platform (new interface in progress)

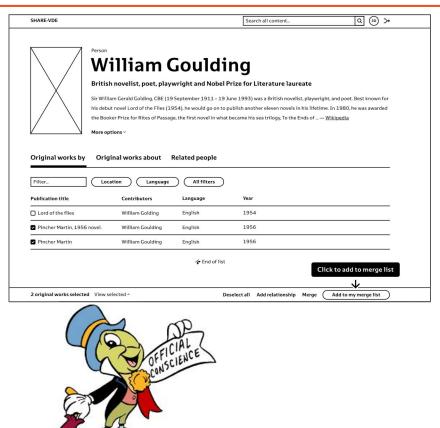

Localisation for the University of Pennsylvania

From linked data publication to linked data editing

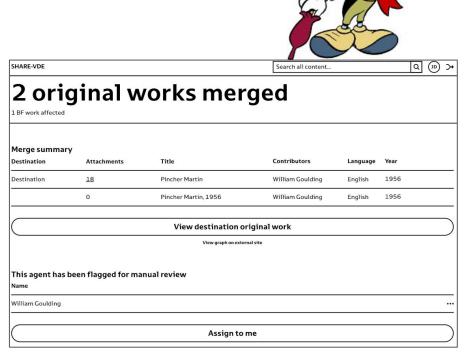

SVDE is evolving from a discovery platform that converts MARC data of libraries in Linked Open Data to an interactive authoritative source providing real services for libraries. This transition is happening through the editor named J. Cricket, that is the new application dedicated to the editing of SVDE clusters of data in a collaborative environment.

From linked data publication to linked data editing

The editing tool J.Cricket will allow for editing the SVDE Cluster Knowledge Base, Sapientia, enabling several actions on the clusters of entities saved in SVDE database, including creation, modification, merge of clusters of works, of agents etc.

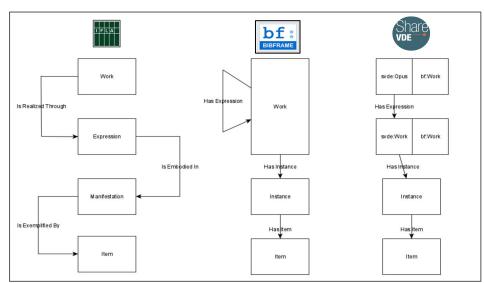

J.Cricket will extend authority capabilities through the integration with external data sources such as Wikidata and ISNI.

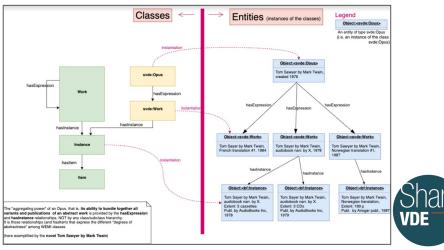

Facilitate interoperability between entity models...

Participation in LD4P3: the challenge of data models interoperability

See the <u>SVDE entity model compared to BF</u> and <u>LRM</u> and an <u>example of application of</u> the model

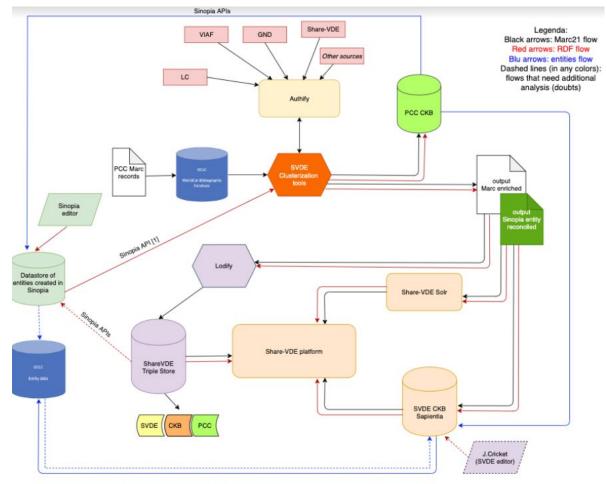

...and interaction with other environments

Participation in LD4P3: SVDE as one of the components to close the loop and put together MARC and BIBFRAME cataloguing

See the diagram online here

Next steps: integration with authority data sources

Wikidata is increasingly authoritative and is used in the library community as a source for entity identification (SVDE property on Wikidata Share-VDE author ID)

Query the source and enrich SVDE data with Wikidata entities information and vice versa \rightarrow connection with <u>Casalini participation in the PCC Wikidata pilot</u>

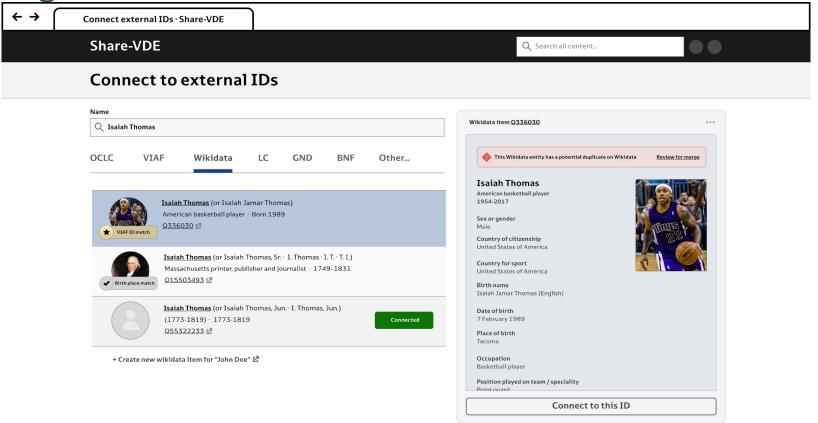

Ad hoc SVDE working group is studying the use cases for interaction (e.g. starting points for the analysis are <u>API:Main page</u> + <u>Wikibase/API</u>, and other documentation)

Major challenge: alignment between Wikidata and SVDE entities

Integration of Wikidata IDs in SVDE with J.Cricket

Thank you!
