Abstract

This specification defines the syntax and semantics of XSLT, which is a language for transforming XML documents into other XML documents.

XSLT is designed for use as part of XSL, which is a stylesheet language for XML. In addition to XSLT, XSL includes an XML vocabulary for specifying formatting. XSL specifies the styling of an XML document by using XSLT to describe how the document is transformed into another XML document that uses the formatting vocabulary.

Conversion Specifications

<http://www.loc.gov/bibframe/mtbf/>

210 - ABBREVIATED TITLE (R)	##=Instance - title - VariantTitle - AbbreviatedTitle
Indicators	
# - Abbreviated key title	## - source - Source - rdf:value - "issnkey"
0 - Other abbreviated title	ignore
Subfield Codes	## - rdfs:label [Make title label by extracting \$ab, keep order in field, substitute blank for each subfield code]
\$a - Abbreviated title (NR)	## - mainTitle - literal
\$b - Qualifying information (NR)	## - qualifier - literal
\$2 - Source (R)	## - source -Source - rdfs:label - "content of \$2"
\$6 - Linkage (NR)	See Subfield \$6 spec

marc2bibframe2

<https://github.com/lcnetdev/marc2bibframe2>

The screenshot shows a web browser window displaying the GitHub repository page for `marc2bibframe2`. The browser's address bar shows the URL `https://github.com/lcnetdev/marc2bibframe2`. The repository page features a header with the filename `README.md`. Below the header, there is a status bar indicating `build passing`. The main content area displays the repository name `marc2bibframe2` in a large font, followed by a horizontal line. Below the line, the text reads "XSLT-based conversion from [MARCXML](#) to [BIBFRAME 2.0](#)". A bulleted list of links is provided, including [Introduction](#), [Using the converter](#) (with sub-links for [Converter parameters](#) and [Converter configuration](#)), [Converter design](#), [Testing](#), [Active record conversion](#), [Metaproxy integration](#), [Known issues](#), and [Repository contents](#).

Conversion Challenges

- Deliberate duplication of data in control fields and data fields
- Data normalization vs. presentation

255 ##\$aScales vary\$d(Zones +90° to +81° to 63°, -81° to 98° ;\$eeq. 1950) .

- Multiscript records
- Item information
- Pace of change

Future Directions

- Refine specifications to prevent duplication of elements
- Improve handling of multi script records
- Configuration driven
- Mapping schema (<http://rml.io>)
- More refined active conversion
