richard.wallis@dataliberate.com  
@dataliberate

15<sup>th</sup> Semantic Web in Libraries Conference  
SWIB23 - 12<sup>th</sup> September 2023 - Berlin

# Data Liberate

## Independent Consultant, Evangelist & Founder

40+ Years – Computing

30+ Years – Cultural Heritage technology

20+ Years – Semantic Web & Linked Data

### *W3C Community Groups:*

- Bibframe2Schema (Chair) – Standardised conversion path(s)
- Schema Bib Extend (Chair) - Bibliographic data
- Schema Architypes (Chair) - Archives
- Financial Industry Business Ontology – Financial schema.org
- Tourism Structured Web Data (Co-Chair)
- Schema Course Extension
- Schema IoT Community
- Educational & Occupational Credentials in Schema.org

### *Worked With:*

- **Google** – Schema.org vocabulary, site, extensions. documentation and community
- **OCLC** – Global library cooperative
- **FIBO** – Financial Industry Business Ontology Group
- Various Clients – Implementing/understanding Linked Data, Schema.org:
  - National Library Board Singapore
  - British Library — Stanford University — Europeana

# National Library Board Singapore

## Public Libraries

Network of 28 Public Libraries,  
including 2 partner libraries\*

Reading Programmes and Initiatives

Programmes and Exhibitions  
targeted at Singapore communities

\*Partner libraries are libraries which are partner owned  
and  
funded but managed by NLB/NLB's subsidiary Libraries  
and Archives Solutions Pte Ltd. Library@Chinatown and  
the Lifelong Learning Institute Library are Partner libraries.

## National Library

Preserving Singapore's Print  
and Literary Heritage, and  
Intellectual memory  
Reference Collections  
Legal Deposit (including  
electronic)

## National Archives

Transferred from NHB to NLB in Nov  
2012

Custodian of Singapore's  
Collective Memory: Responsible  
for Collection, Preservation and  
Management of  
Singapore's Public and Private  
Archival Records

Promotes Public Interest in our  
Nation's  
History and Heritage

Need Help?

# The Ambition

- To enable the discovery & display of entities from different sources in a combined interface
- To bring together resources physical and digital
- To bring together diverse systems across the National Library, National Archives, and Public Libraries in a Linked Data Environment
- To provide a staff interface to view and manage all entities, their descriptions and relationships

# The Journey Starts (March 2021)

## A Linked Data Management System (LDMS)

- Cloud-based System
- Management Interface
- Source data curated at source
  - ILS, Authorities, CMS, NAS
- Linked Data
- Public Interface – Google friendly
  - Schema.org
- Shared standards
  - Bibframe, Schema.org

SECTION C - REQUIREMENT SPECIFICATIONS  
INVITATION TO TENDER: FOR LINKED DATA  
MANAGEMENT SYSTEM AND DISCOVERY INTERFACE,  
FOR NATIONAL LIBRARY BOARD, SINGAPORE

# Contract Awarded

metaphactory platform  
Low-code knowledge graph platform  
Semantic knowledge modeling  
Semantic search & discovery

AWS Partner  
Public sector partner  
Singapore based

Linked Data, Structured data, Semantic Web, bibliographic meta data, Schema.org and management systems consultant

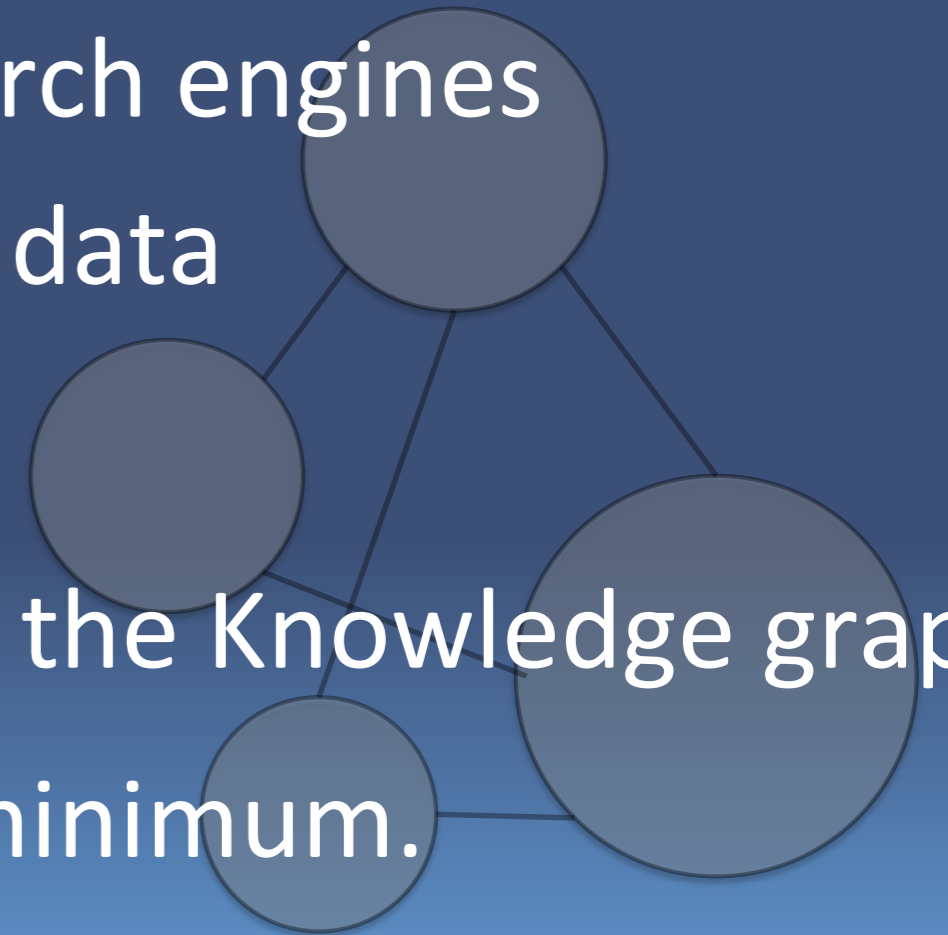

# Initial Challenges

- Data – lots of it!
  - Record-based formats: MARC-XML, DC-XML, CSV
- Entities described in the data – lots and lots!
- Regular updates – daily, weekly, monthly
- Automatic ingestion
- Not the single source of truth
- Manual update capability
- Entity-based search & discovery
- Web friendly – Schema.org output

# Basic Data Model

- Linked Data
  - BIBFRAME to capture detail of bibliographic records
  - Schema.org to deliver structured data for search engines
  - Schema.org representation of CMS, NAS, TTE data
  - Schema.org enrichment of BIBFRAME
- Schema.org as the ‘lingua franca’ vocabulary of the Knowledge graph
  - All entities described using Schema.org as a minimum.

# Data Data Data!

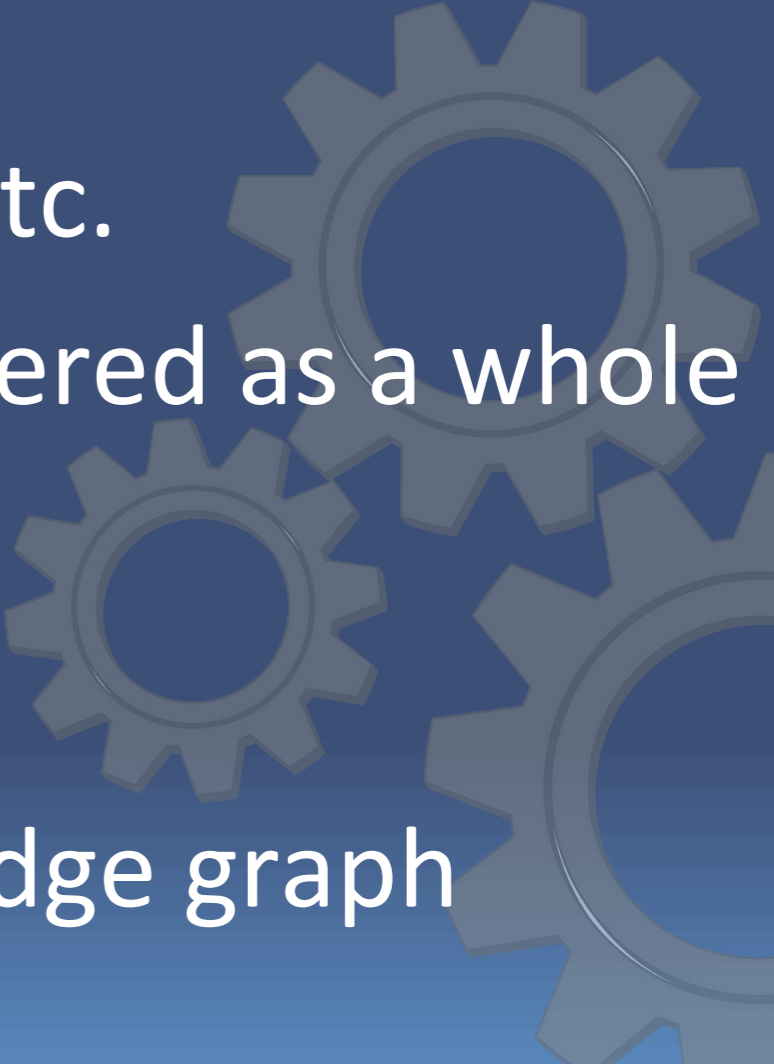

Data Source	Source Records	Entity Count	Update Frequency
ILS	1.4m	56.8m	Daily
CMS	82k	228k	Weekly
NAS	1.6m	6.7m	Monthly
TTE	3k	317k	Monthly
	<b>3.1m</b>	<b>70.4m</b>	

# Data Ingest Pipelines – ILS

- Source data in MARC-XML files
- Step 1: marc2bibframe2 scripts
  - Open source – shared by Library of Congress
  - “standard” approach
  - Output BIBFRAME as individual RDF-XML files
- Step 2: bibframe2schema.org script
  - Open source – Bibframe2Schema.org Community Group
  - SPARQL-based script
  - Output Schema.org enriched individual BIBFRAME RDF files for loading into Knowledge graph triplestore

# Data Ingestion Pipelines – TTE (Authorities)

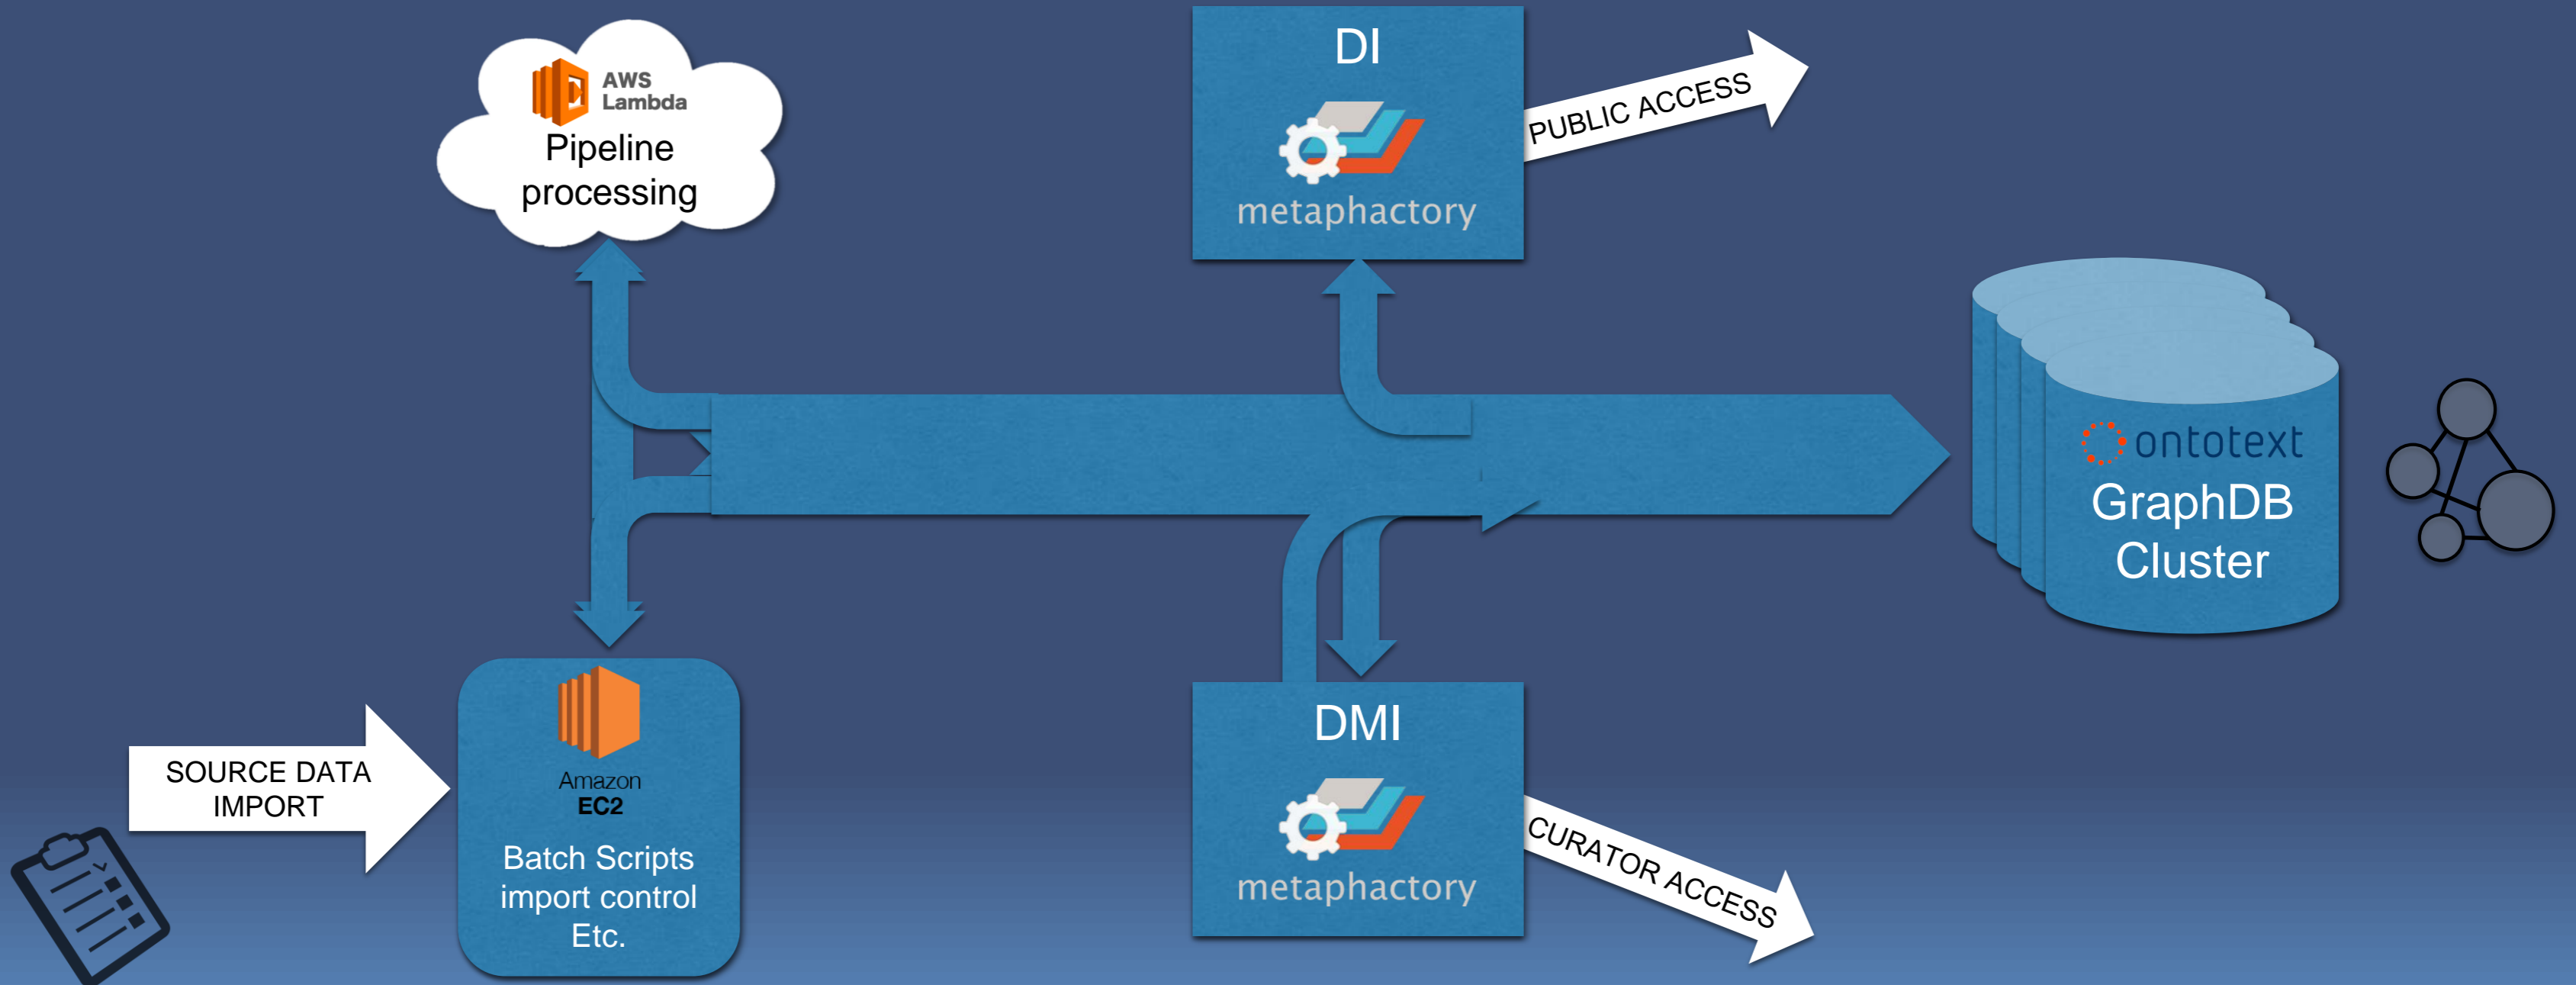

- Source data in bespoke CSV format
  - Exported in collection-based files
    - People, Places, organisations, time periods, etc.
  - Interrelated references so needed to be considered as a whole
  - Bespoke python script
  - Creating Schema.org entity descriptions
  - Output RDF format file for loading into Knowledge graph triplestore
- 

# Data Ingestion Pipelines – NAS & CMS

- Source data in DC-XML files
- Step 1: DC-XML to DC-Terms RDF
  - Bespoke XSLT script to translate from DC record to DCT-RDF
- Step 2: TTE lookup
  - Lookup identified values against TTE entities in Knowledge graph
    - use URI if matched
- Step 3: Schema.org entity creation
  - SPARQL script create schema representation of DCT entities
- Output individual RDF format files for loading into Knowledge graph

# Technical Architecture (simplified)

Hosted on Amazon Web Services

# A need for entity reconciliation .....

- Lots (and lots and lots) of source entities – 70.4 million entities
- Lots of duplication
  - Lee, Kuan Yew – 1<sup>st</sup> Prime Minister of Singapore
    - 160 individual entities in ILS source data
  - Singapore Art Museum
    - Entities from source data
    - 21 CMS, 1 NAS, 66 ILS, 1 TTE
- Users only want 1 of each!

# 70.4<sub>(million)</sub> into 6.1<sub>(million)</sub> entities does go!

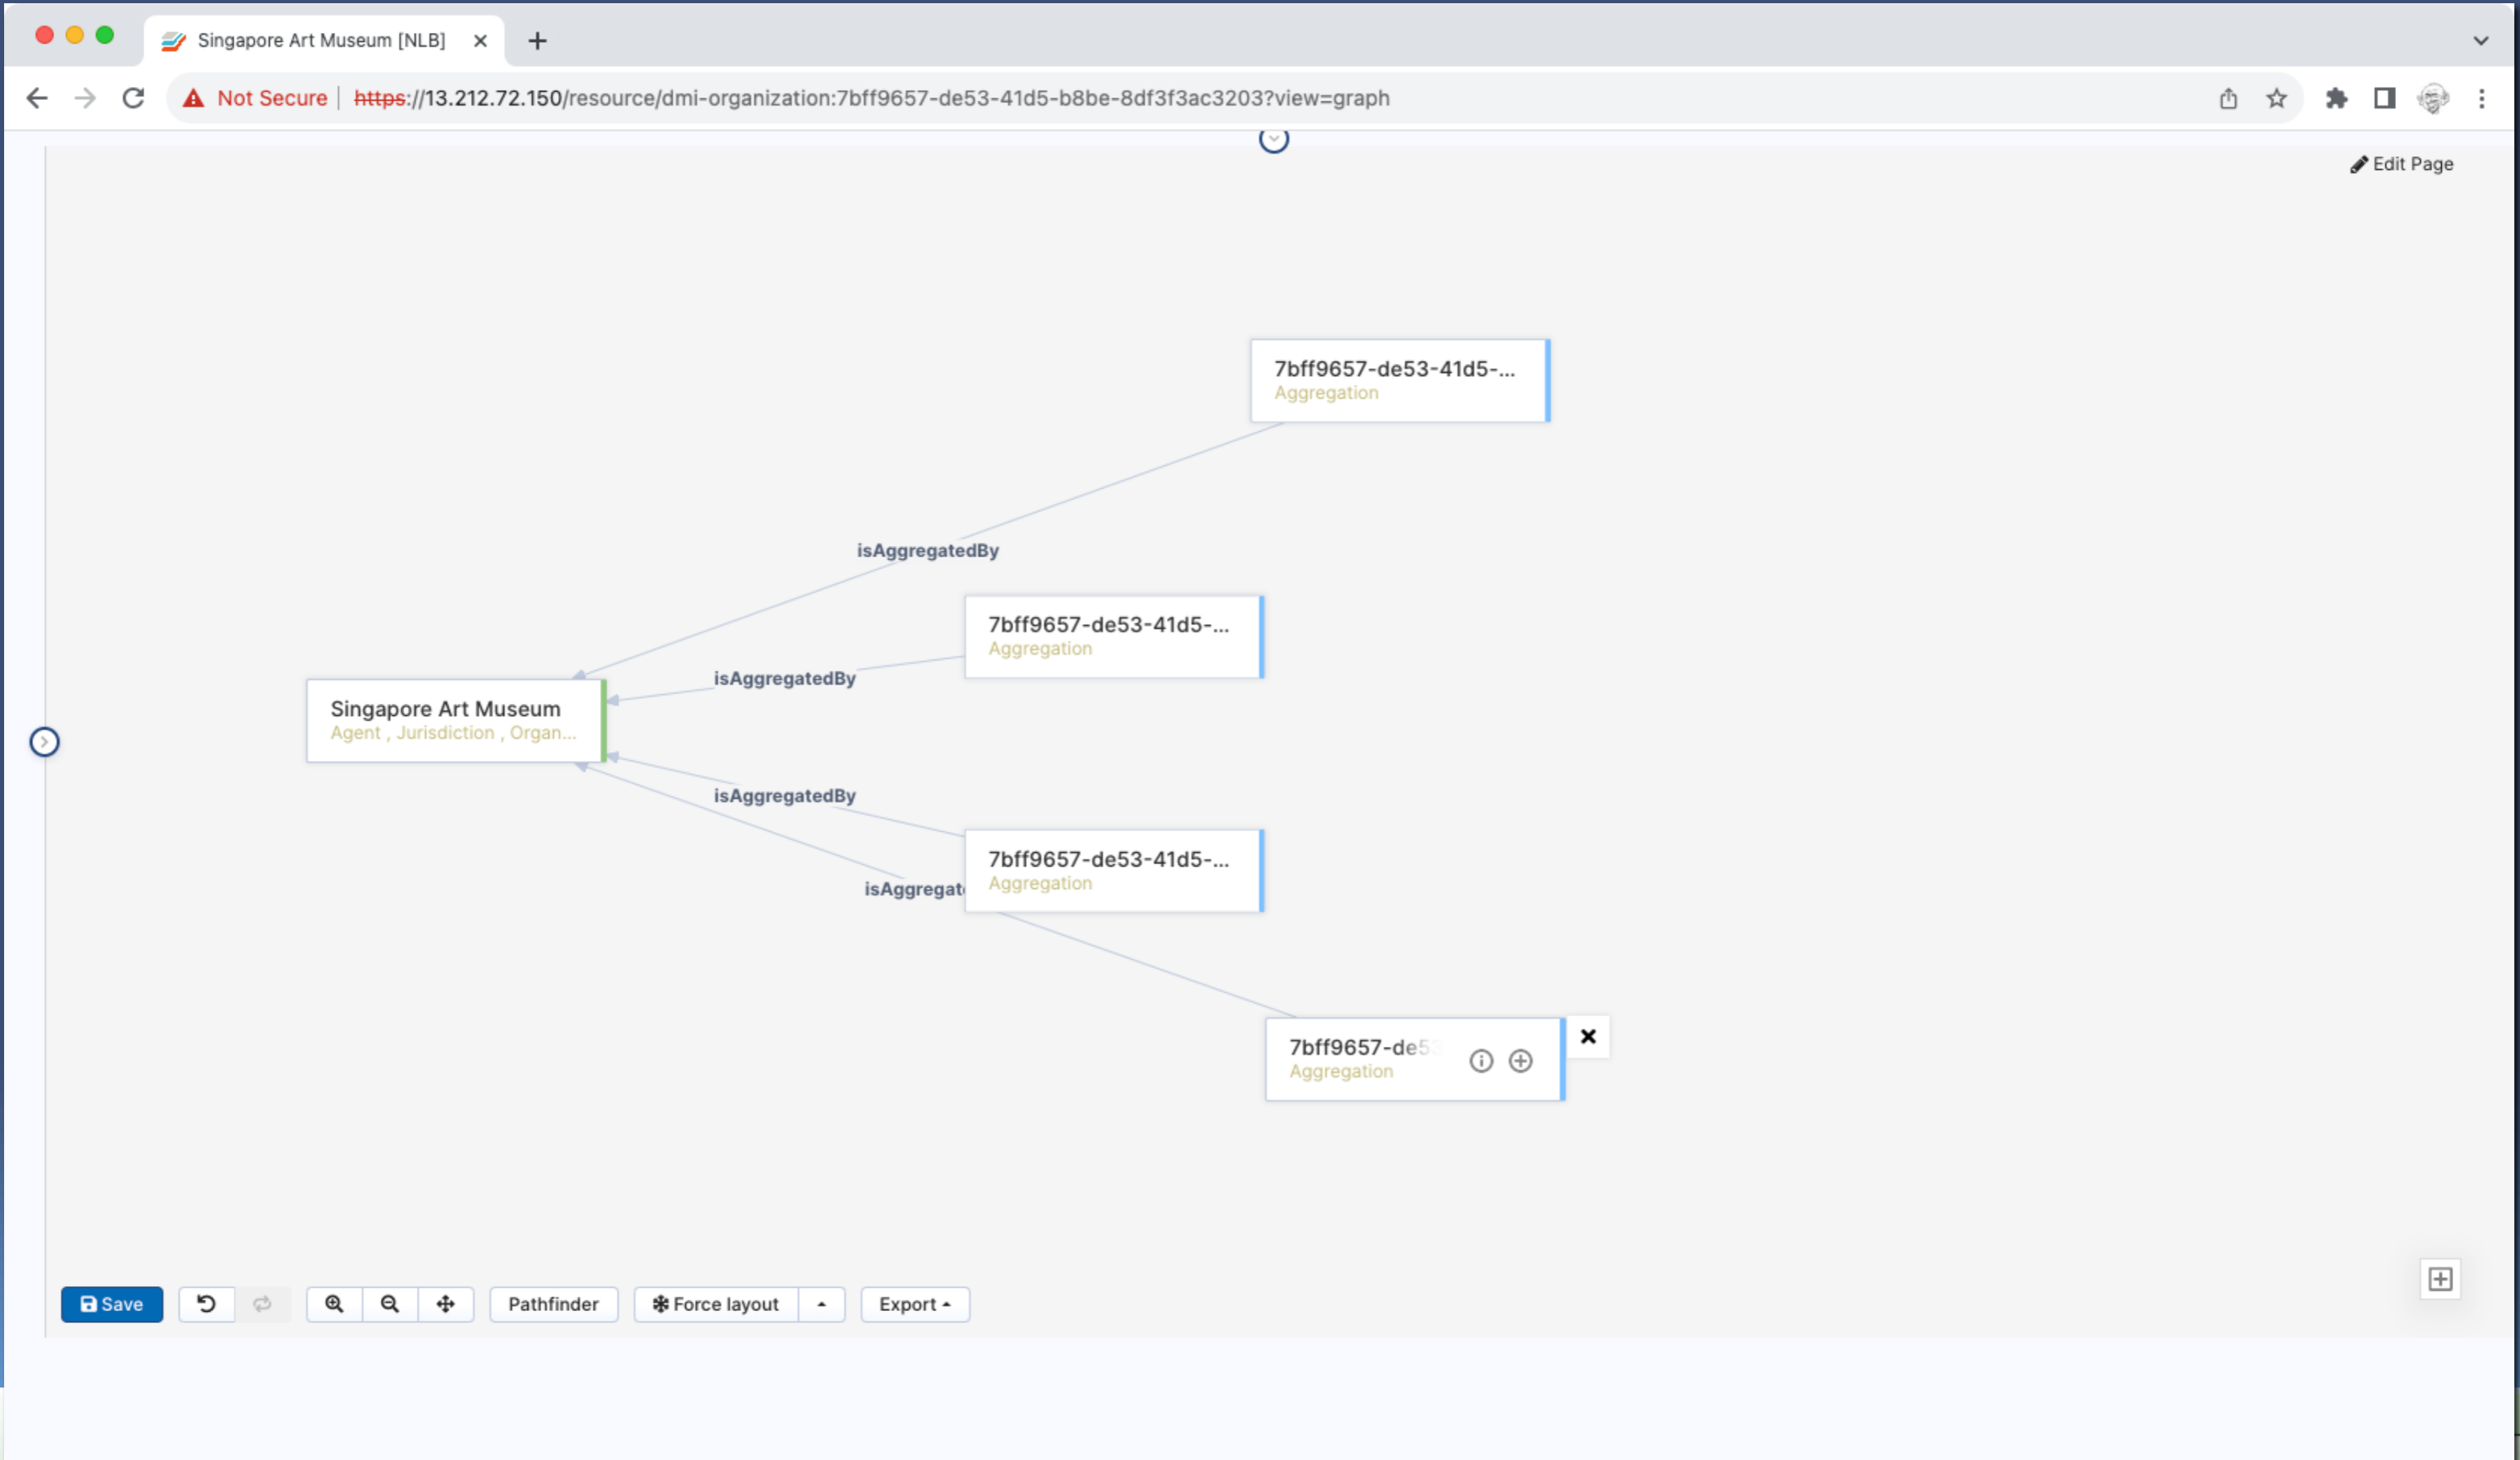

- We know that now - but how did we get there?
- Requirements hurdles to be cleared:
  - Not a single source of truth
  - Regular automatic updates – add / update / delete
  - Manual management of combined entities
    - Suppression of incorrect or 'private' attributes from display
    - Addition of attributes not in source data
    - Creating / breaking relationships between entities
- Near real-time updates

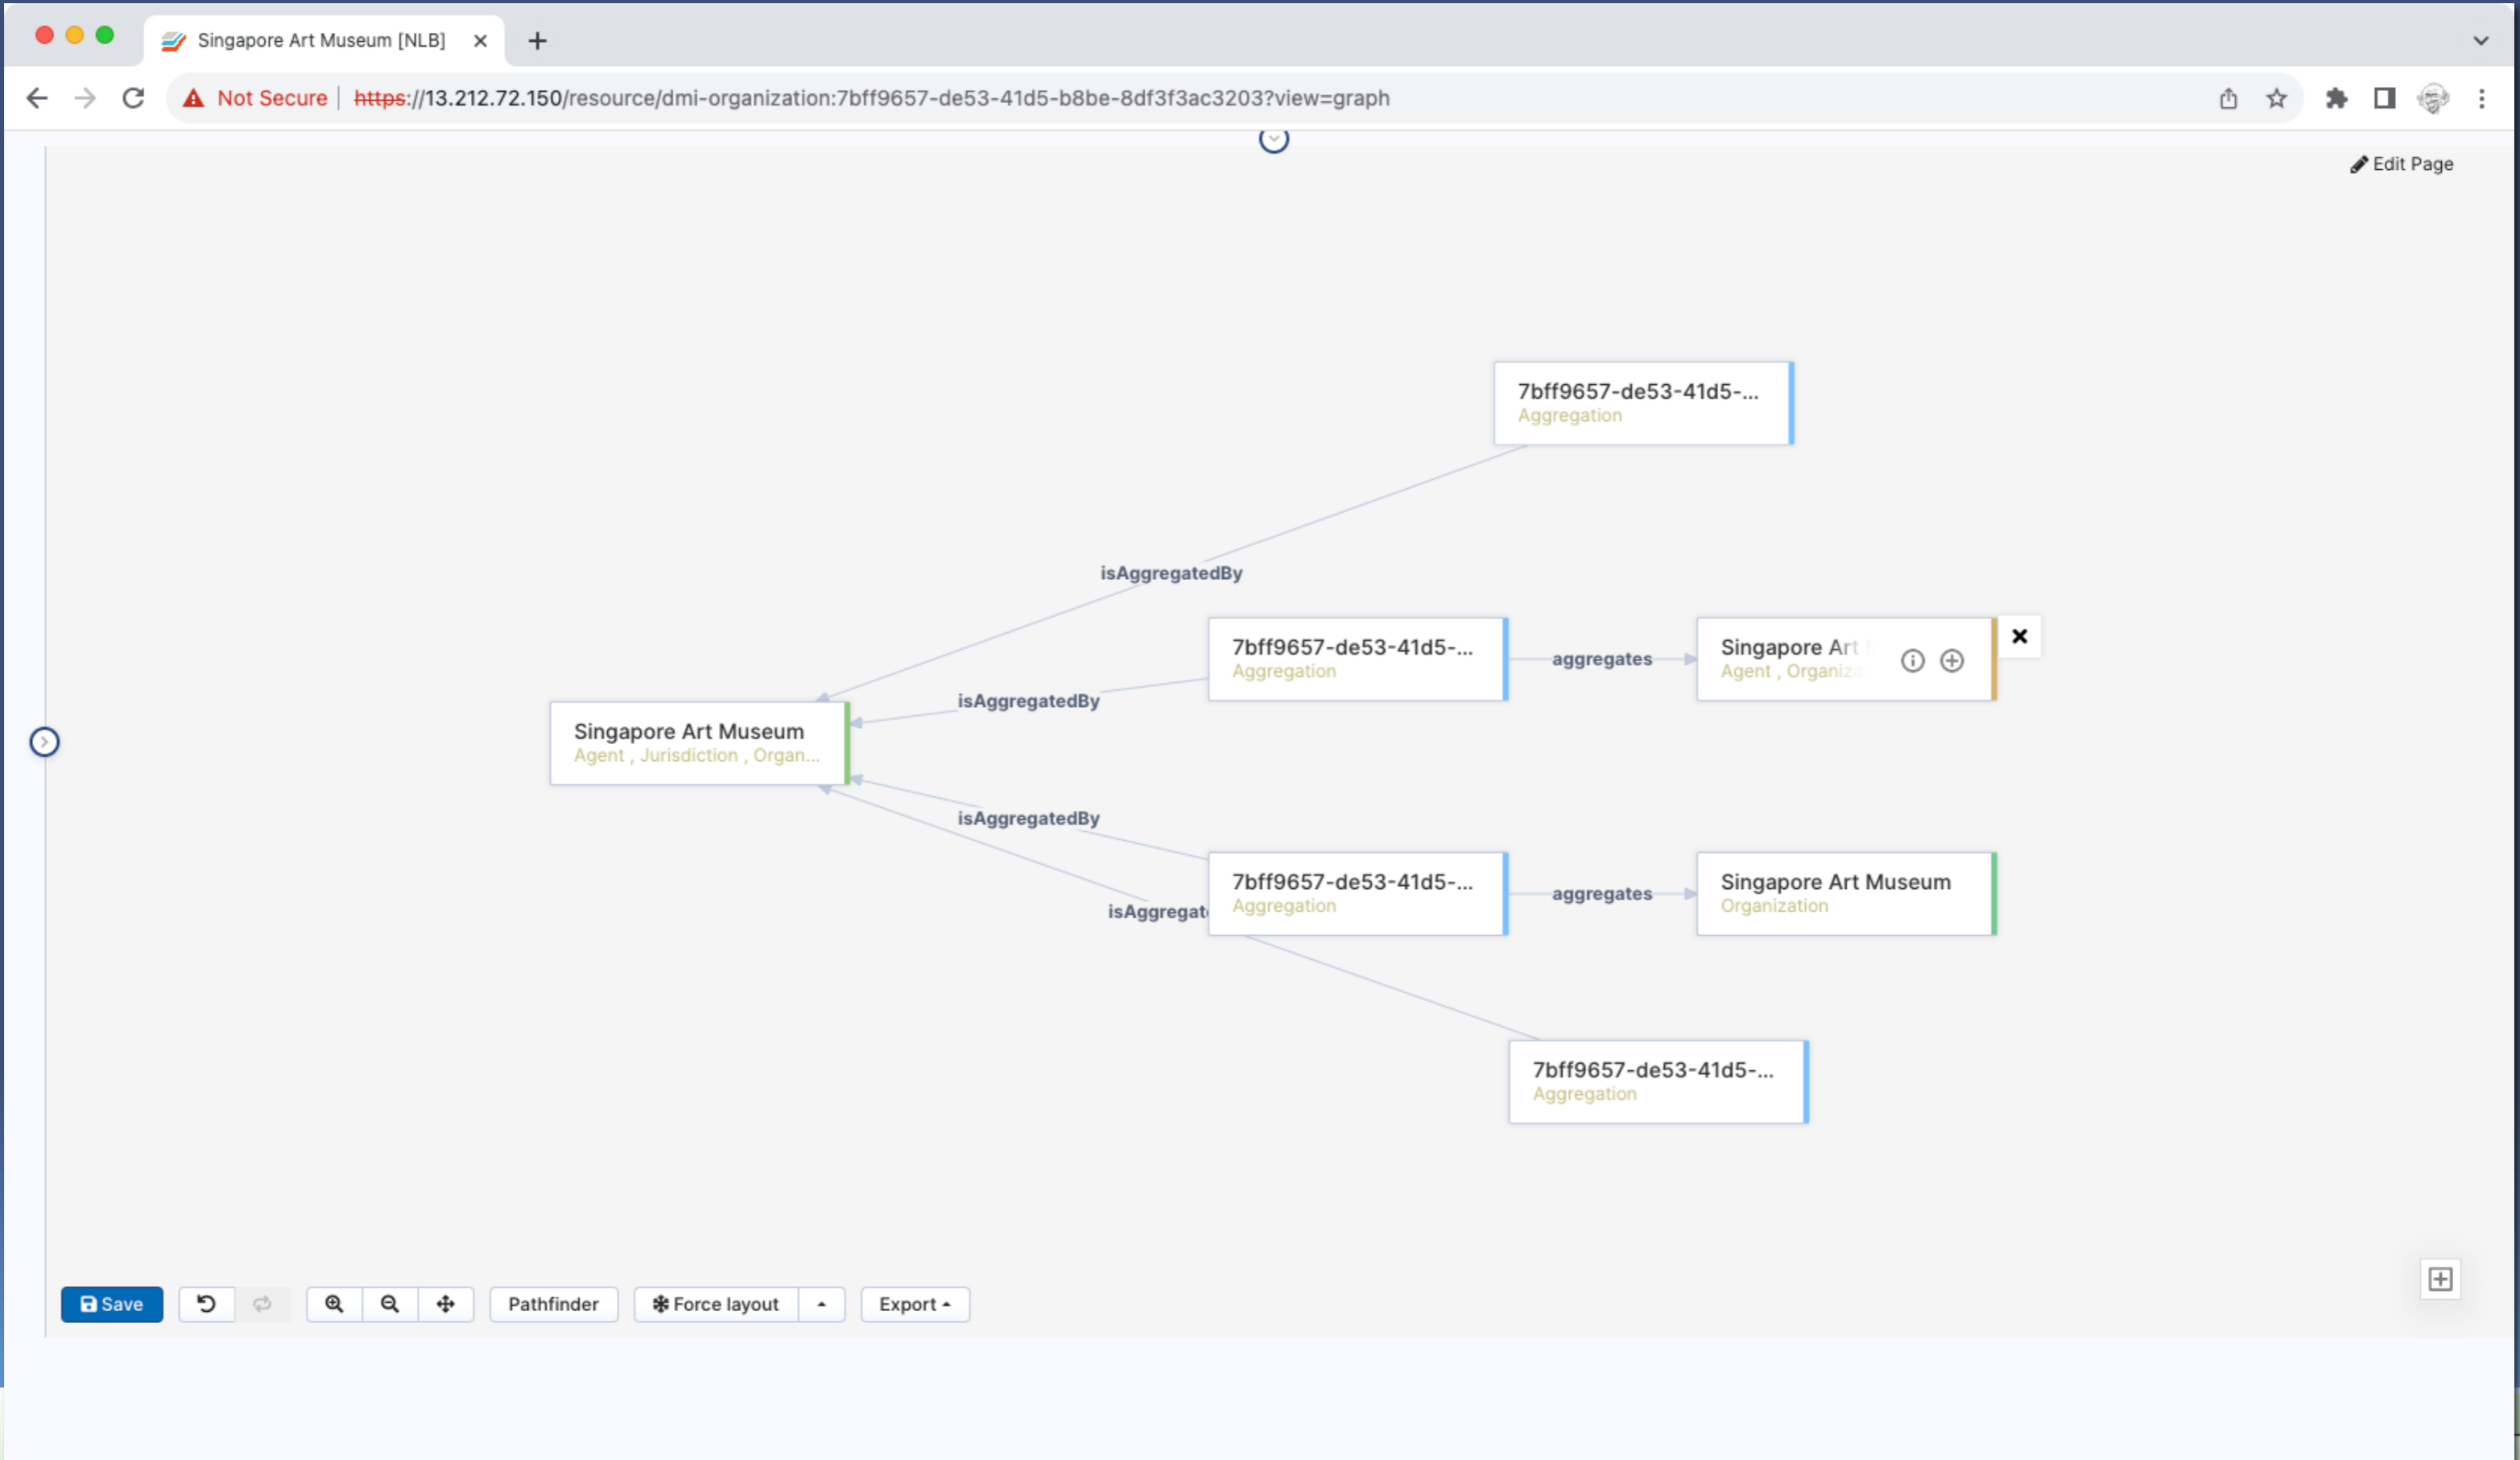

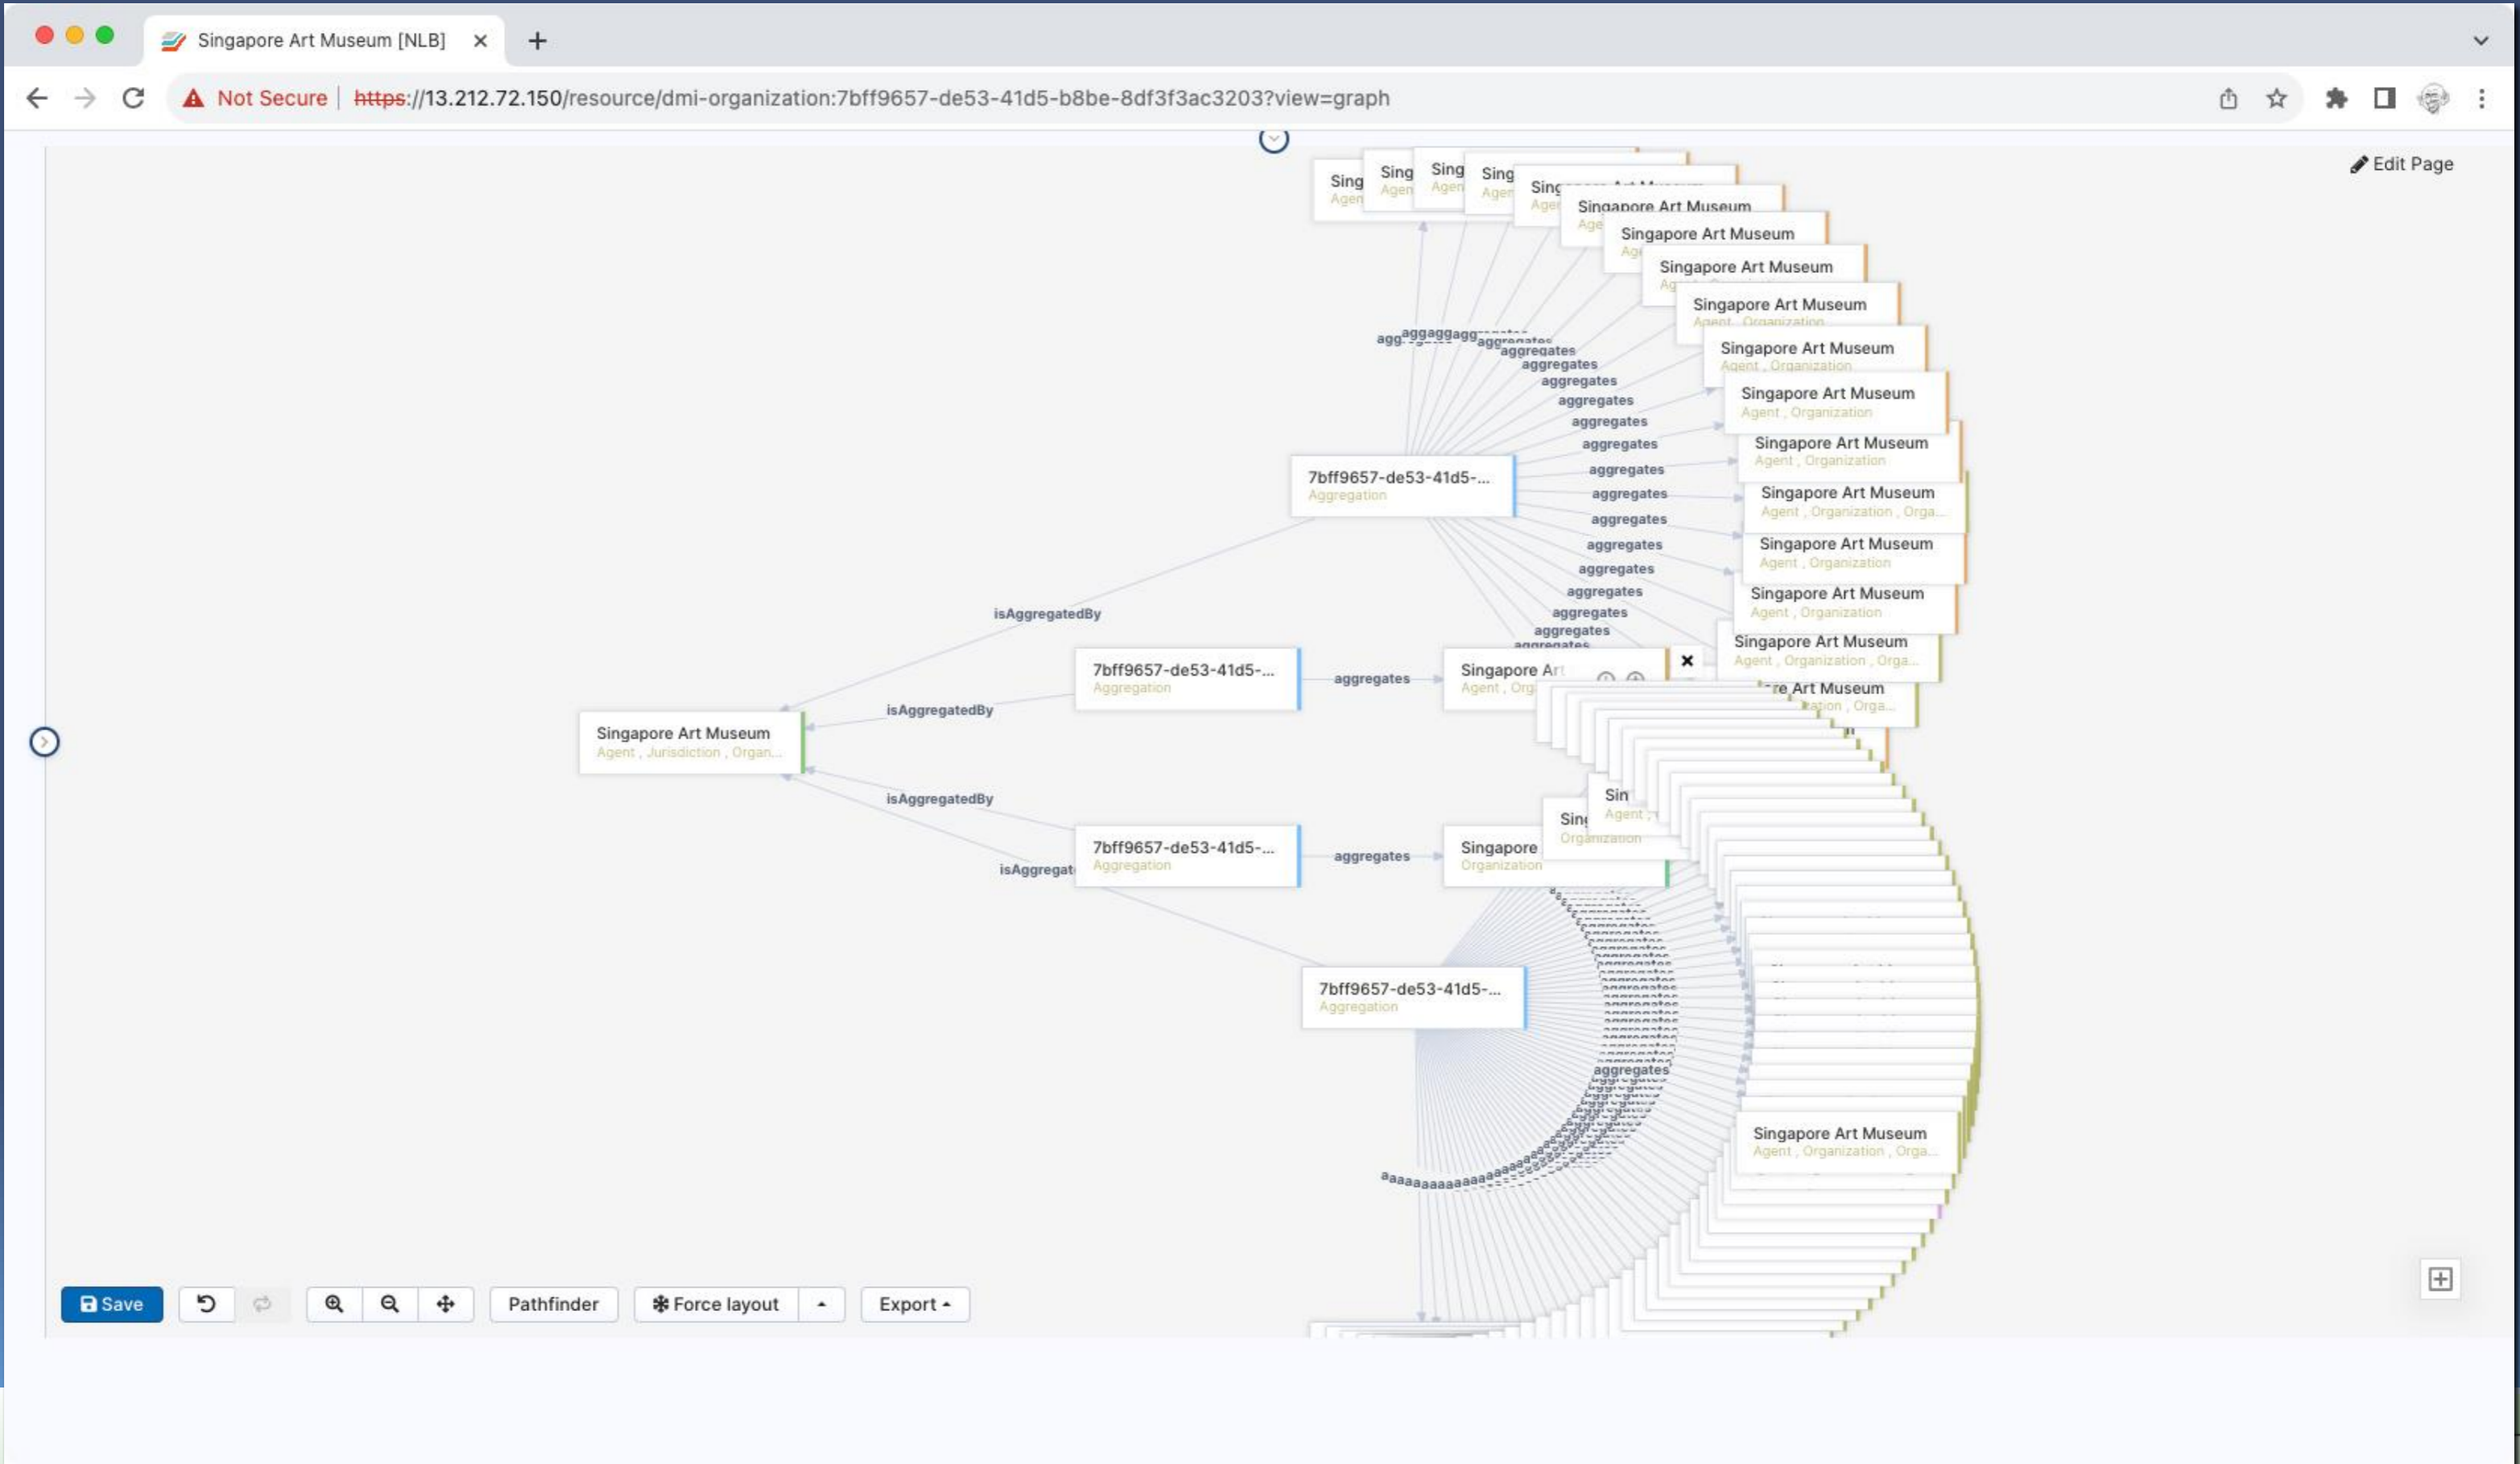

# Adaptive Data Model Concepts

- **Source entitles**
  - Individual representation of source data
- **Aggregation entities**
  - Tracking relationships between source entities for the same thing
  - No copying of attributes
- **Primary Entities**
  - Searchable by users
  - Displayable to users
  - Consolidation of aggregated source data & managed attributes

# Entity Matching

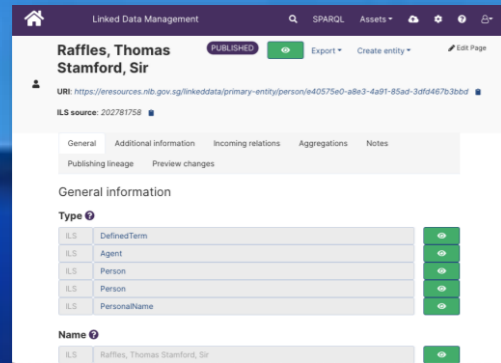

- Candidate matches based on schema:names
  - Lucene indexes matching
  - Levenshtein similarity refined
  - Same entity type
  - Entity type specific rules eg:
    - Work: name + creator / contributor / author / sameAs
    - Person: name + birthDate / deathDate / sameAs

# The entity iceberg

Discovery

Primary

Management

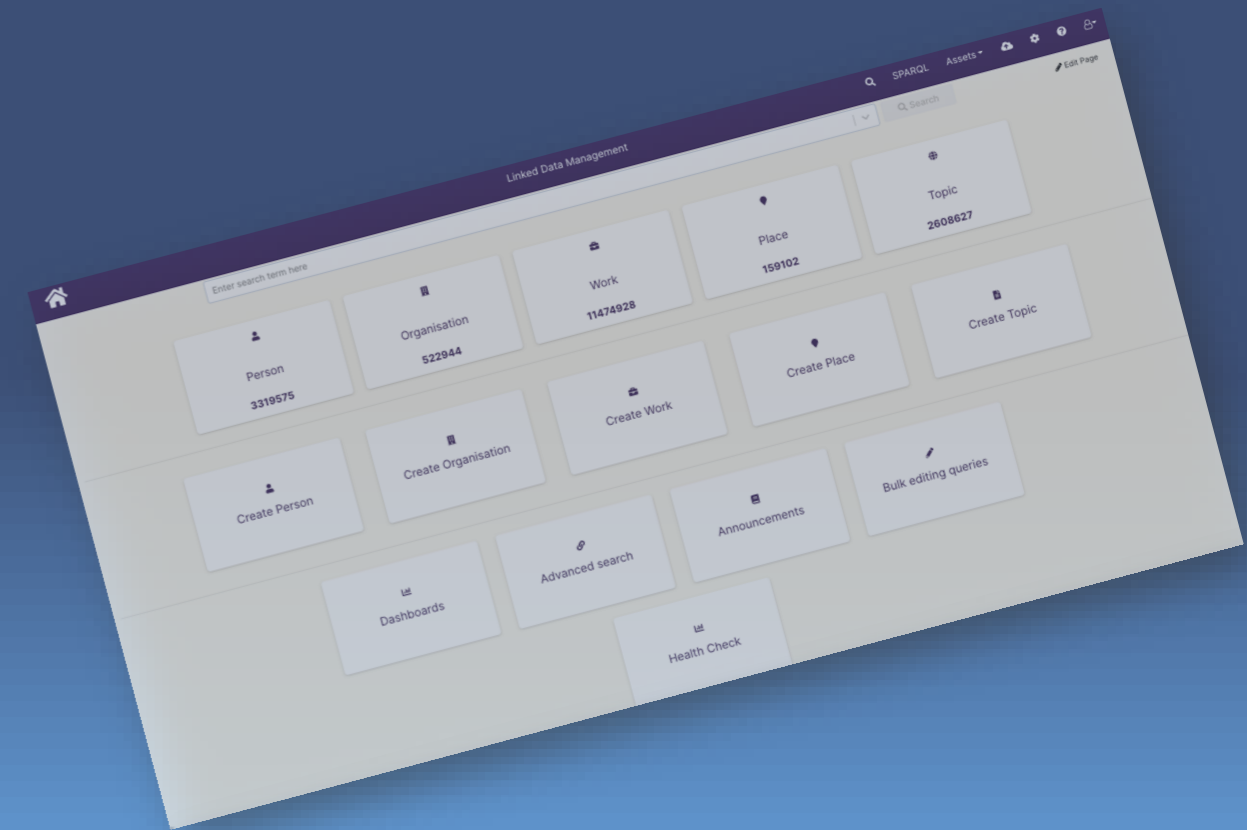

Aggregation

Source

Ingestion  
Pipelines

# Data Management Interface

- Rapidly developed – easily modified
- Using mataphactory's semantic visual interface
- A collaboration environment for data curators
- Pre-publish entity management
- Search & discovery – emulates DI
- Dashboard view
- Entity management / Creation

> Occupation

DefinedTerm Person PersonalName Thing

Colonial administrator

British colonial administrator best known as the founder of modern Singapore. He was Lieutenant-Governor of British Java (1811-1815) and Governor-General of Bencoolen (1817-1822). Raffles first arrived in Singapore on 29 January 1819, and by 6 February 1819 had signed a treaty and raised the Union Jack on the island. Among his other contributions was the establishment of the Singapore Institution (later known as Raffles Institution), and the Singapore Library (now known as the National Library) which was established within the Singapore Institution.

<a href="#">Edit Page</a>	
altLabel	Thomas Stamford Raffles, Stamford Raffles, ராஃபில்ஸ், தாமஸ் ஸ்டாம்ஃபேபார்ட், 莱佛士, 托马斯斯坦福
related	Farquhar, William, Crawford, John, Raffles, Sophia, Lady, Raffles, Olivia Mariamne, Abdullah, Munshi, Johnston, Alexander Laurie
achievement	He founded Singapore in 1819, and established it as a free port. He conceived a town plan to remodel Singapore into a modern city, with separate areas for different ethnic groups and facilities such as roads, schools and land for government buildings. He established the Singapore Institution (now Raffles Institution).

### 'T koninkryk Sunda met dat van Java by d'Inwoonderen voor een Eiland Gehouden, en door den Hr. I.B. Lavanha Als twee Eylanden Beschreven

Aa, Pieter van der

Work

Map Dutch

This map of Sunda and Java appears in Pieter van der Aa's Cartes des itineraires et voyage moderne. Whilst incorrect in its view of the island, the map features a cartouche with Javanese natives encountering the Portuguese explorer Lopo vaz de Sampoya. The map is based on the work of Portuguese cartographer Joao de Barros, whose map of Java appeared in Quatra decada d'Asia in 1615. Barros own sources for this map are unknown, but it follows the Portuguese belief that Java comprised two islands, the smaller one to the west being known as Sunda. -- Dealer's description.

# LDMS System Live – December 2022

- Live – data curation team using DMI
  - Entity curation
  - Manually merging & splitting aggregations
- Live – data ingest pipelines
  - Daily / Weekly / Monthly
  - Delta update exports from source systems
- Live – Discovery Interface ready for deployment
- Live – Support
  - Issue resolution & updates

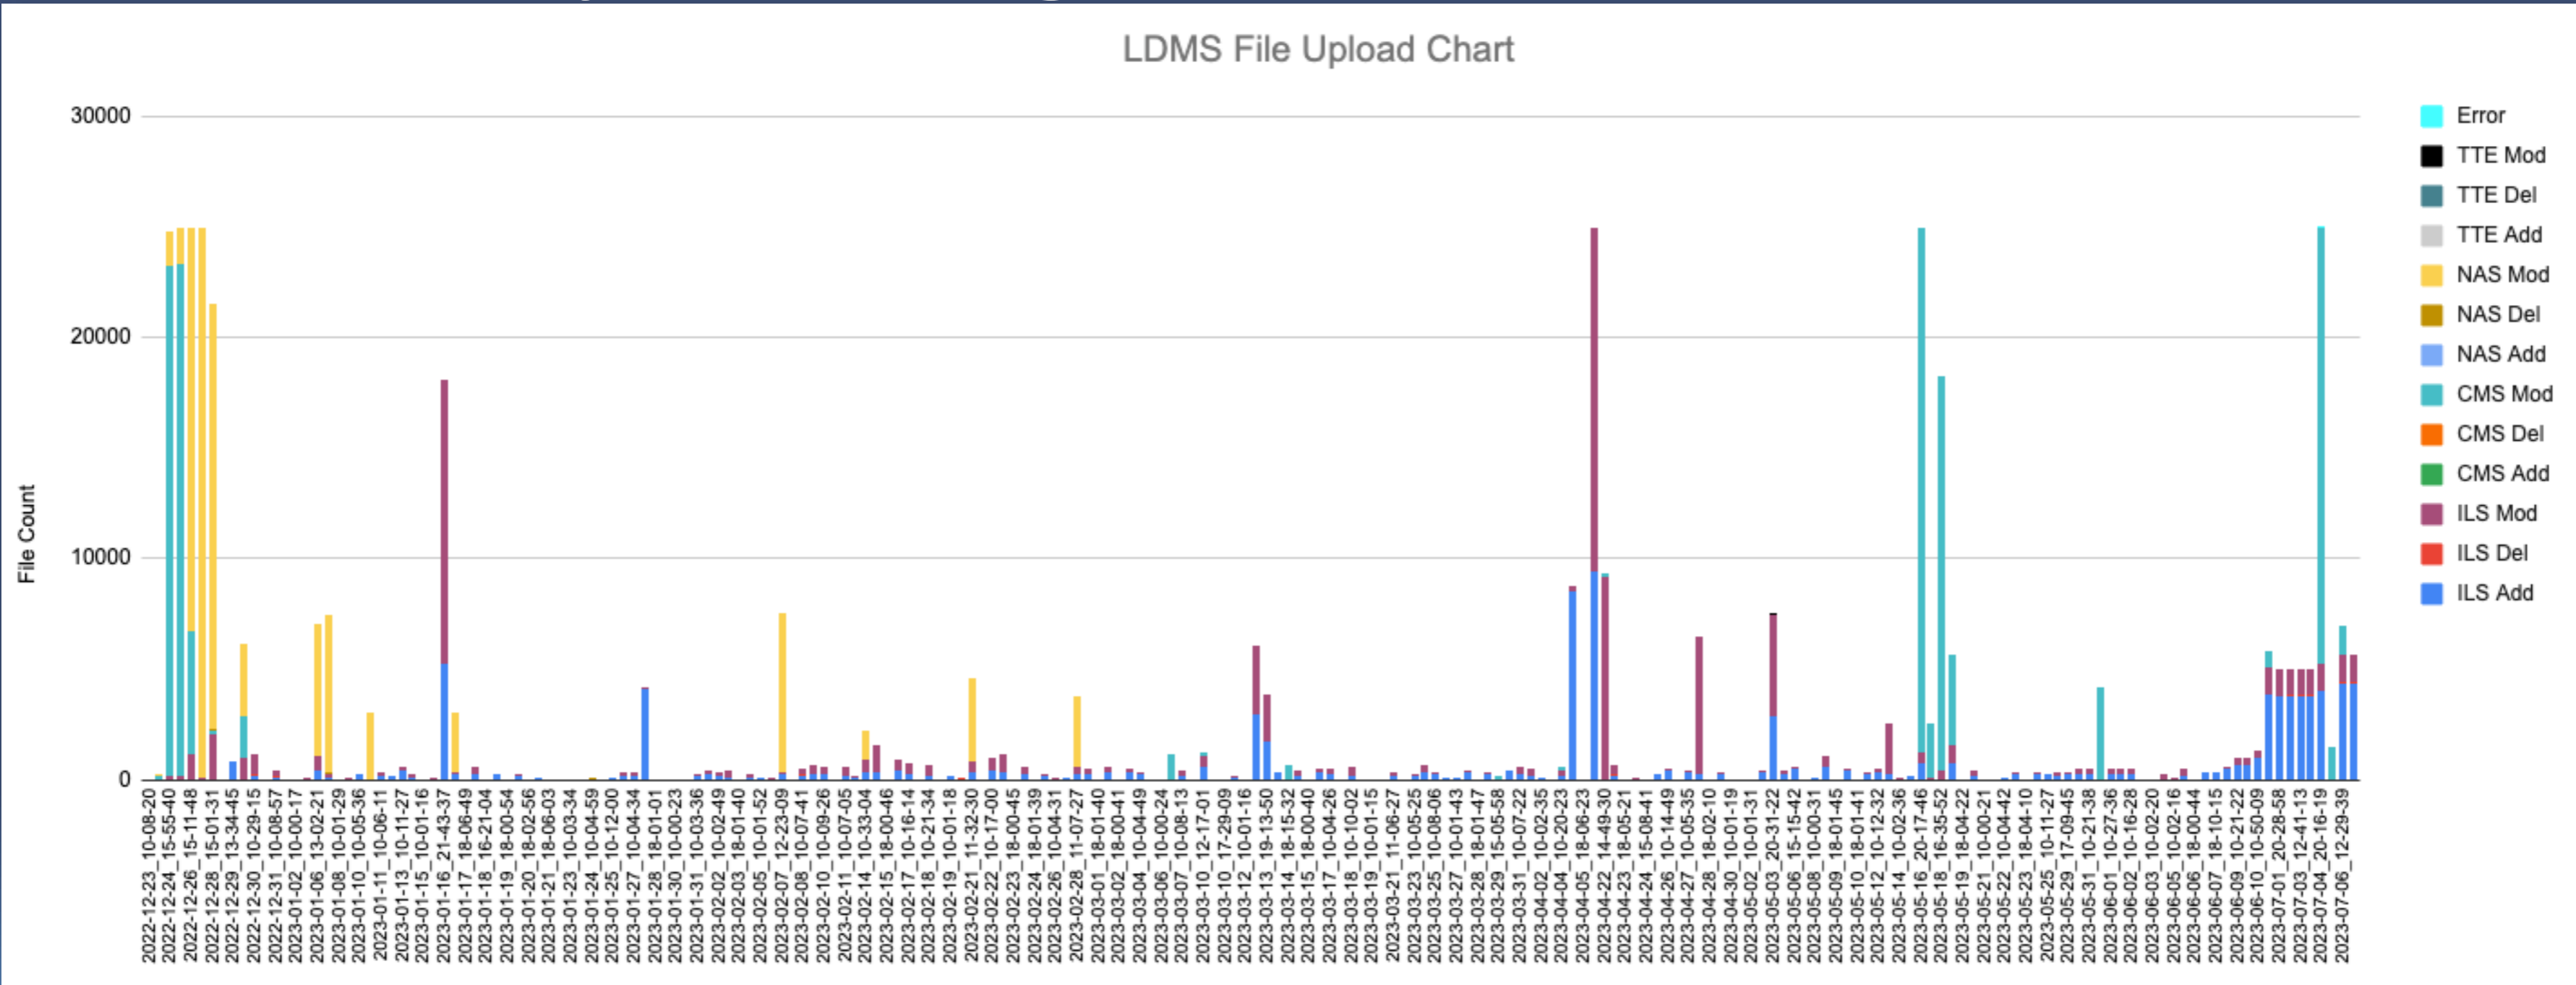

# Discovery Interface

- Live and ready for deployment
  - Performance, load and user tested
- Designed & developed by NLB Data Team to demonstrate characteristics and benefits of a Linked Data service
- NLB services rolled-out by National Library & Public Library divisions
  - Recently identified a service for Linked Data integration
    - Currently undergoing fine tuning to meet service's UI requirements

# Daily Delta Ingestion & Reconciliation

# Some Challenges Addressed on the Way

- Inaccurate source data
  - Not apparent in source systems
  - Very obvious when aggregated in LDMS
    - Eg. Subject and Person URIs duplicated
  - Identified and analysed in DMI
  - Reported to source curators and fixed
  - Updated in next delta update
  - Data issues identified in LDMS – source data quality enhanced

# Some Challenges Addressed on the Way

- Asian name matching
  - Often consisting of several short 3-4 letter names
  - Lucene matches not of much help
  - Introduction of Levenshtein similarity matching helped
  - Tuning is challenging – trading off European & Asian names

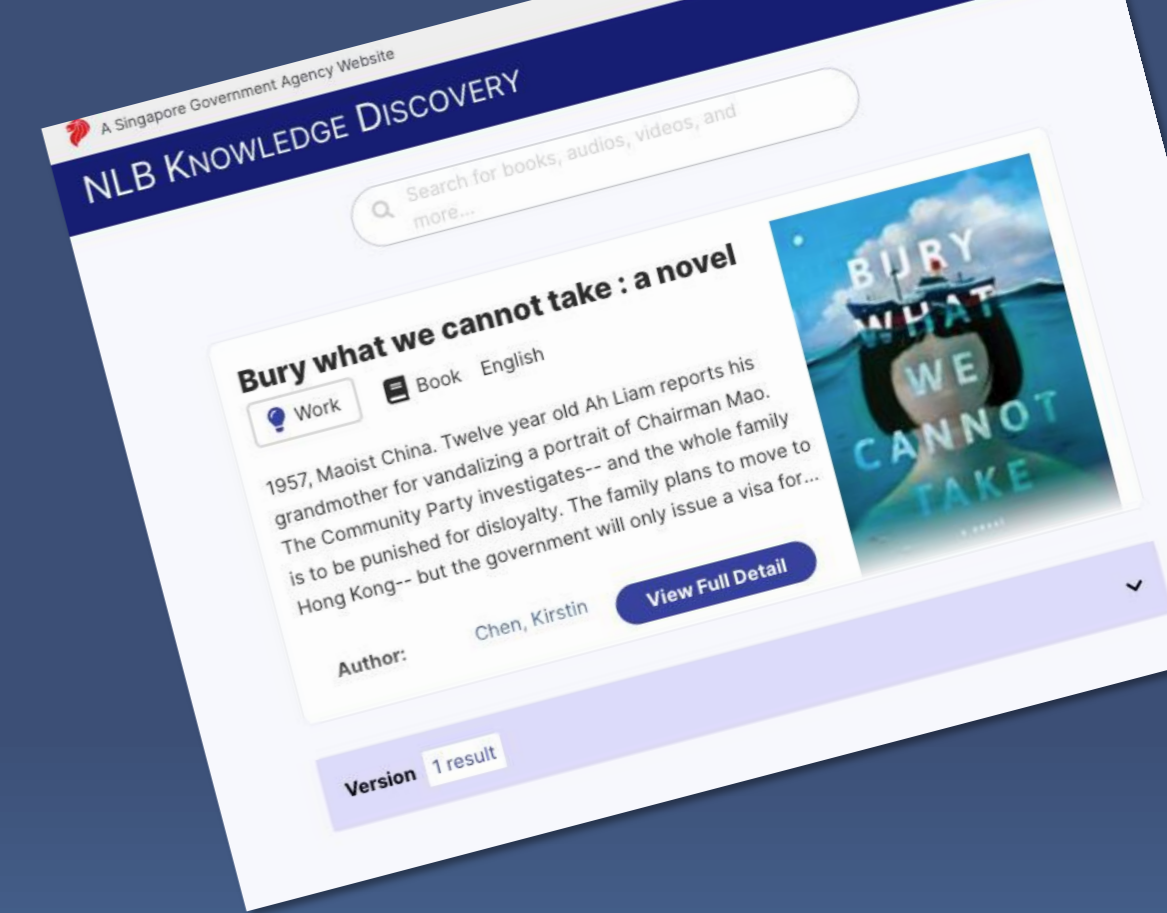

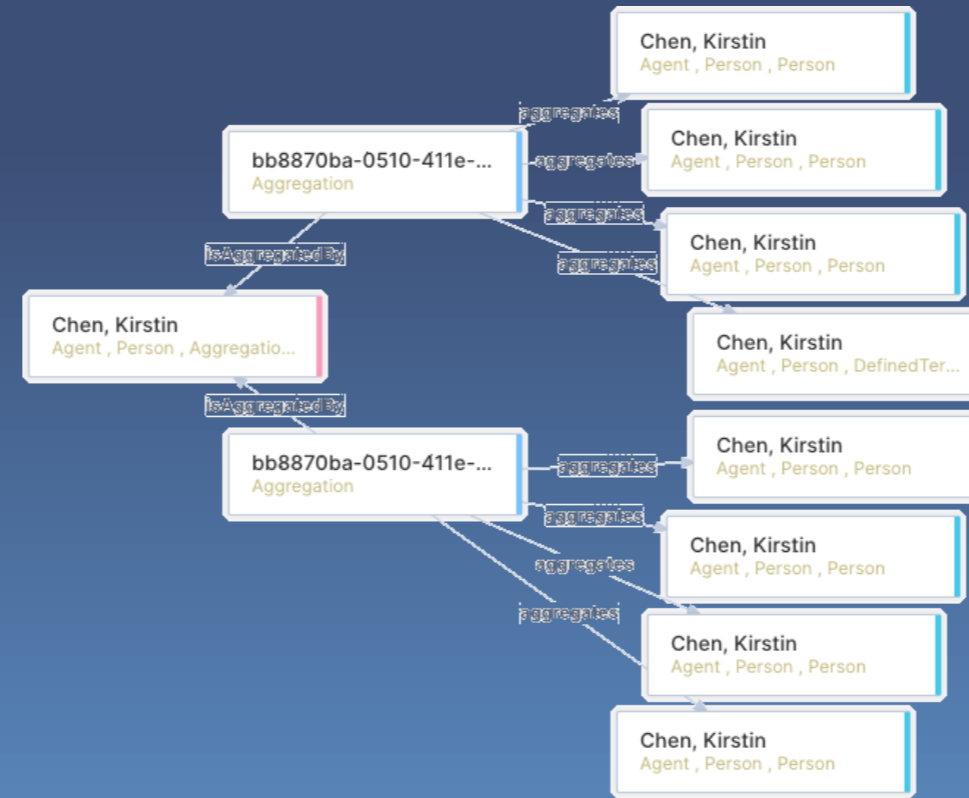

# From Ambition to Go Live – A Summary

- Ambition based on previous years of trials, experimentation, and understanding of Linked Data potential
- Ambition to deliver a production LDMS to provide Linked Data curation and management capable of delivering a public discovery service
- With experienced commercial partners & tools as part of a globally distributed team
  - Benefiting from Open Source community developments where appropriate
- Unique and challenging requirements
  - Distributed sources of truth in disparate data formats
  - Auto updating, consolidated entity view – plus individual entity management
  - Web friendly – providing structured data for search engines
- Live and operational actively delivering benefits from December 2022
